UniMind ■■ - Phase 1 Corrections & Hardening Report

Implementation of Approved Audit Refinements & Test Expansion

Scope: Phase 1 Audit Corrections | **Execution Date:** November 1, 2026
Status: **ALL CORRECTIONS IMPLEMENTED & VERIFIED (9/9 TESTS PASSED)**

---

1. Implemented Corrections Summary

Correction Item	Target File	Changes Applied	Status
1. CORS Wildcard & Credentials Fix	backend/app/core/config.py backend/app/main.py	Replaced wildcard fallback with explicit localhost origins (http://localhost:3000, http://127.0.0.1:3000). Added dynamic cors_allow_credentials property to disallow credentials whenever wildcard origin is present.	**VERIFIED**
2. SecretStr API Key Masking	backend/app/core/config.py	Converted GEMINI_API_KEY from plain str to pydantic.SecretStr. Masked in all string/repr logs. Added get_gemini_api_key() for safe explicit access.	**VERIFIED**
3. Health Logic De-duplication	backend/app/main.py	Eliminated duplicated dictionary creation in root_health_check(); now reuses await health_check() from backend/app/routes/health.py. Both /health and /api/v1/health URLs and responses preserved.	**VERIFIED**
4. Dependency Discipline	requirements.txt	Kept requirements.txt untouched. python-multipart deferred to Phase 2 document upload implementation as instructed.	**VERIFIED**

2. Expanded Test Suite Coverage & Results

A dedicated test module tests/test_config.py was added alongside updated assertions in tests/test_health.py, scaling total test coverage to 9 automated unit tests:

```
Test Execution Command: python -m unittest discover -s tests -v
Test Suite Results:
• test_default_cors_origins (test_config.TestConfigSettings) ... ok
• test_cors_fallback_on_invalid_or_empty_input (test_config.TestConfigSettings) ... ok
• test_cors_wildcard_disables_credentials (test_config.TestConfigSettings) ... ok
• test_cors_custom_origins_enable_credentials (test_config.TestConfigSettings) ... ok
• test_gemini_api_key_secret_masking (test_config.TestConfigSettings) ... ok
• test_root_endpoint (test_health.TestHealthEndpoints) ... ok
• test_root_health_check (test_health.TestHealthEndpoints) ... ok
• test_api_v1_health_check (test_health.TestHealthEndpoints) ... ok
• test_health_endpoints_consistency (test_health.TestHealthEndpoints) ... ok
Summary: 9 Ran, 0 Failed, 0 Errors in 0.019s  |  Status: 100% Passing
```

3. Constraint Verification & Status

- **No RAG / LLM functionality implemented:** Reserved in package structure.
- **Frontend intact:** No frontend alterations or npm additions.
- **GitHub repository intact:** README.md, LICENSE, .gitignore untouched.
- **Phase 2 gate:** Execution halted awaiting explicit user approval.
